

**NEW! EPIC DC technology**

With the new EPIC DC integration module, solar panels can be combined directly with our batteries without converting them to AC power, the EPIC replaces the traditional alternating current (AC) solar inverter. The DC network is versatile, has lower investment costs and makes it possible to build the renewable infrastructure of the future (DC Microgrids). This application ensures less dependency on the grid and ensures that more is possible with a smaller grid connection. With this integrated technology, you can benefit from cost savings, better reliability and higher efficiency.
